Endpoint Security Assessment Report

Generated On	18 July 2026 17:40
Hostname	Smriti
Operating System	Windows
IP Address	10.248.214.223

Report ID	CG-20260718174021
Generated On	18 July 2026 17:40
Scan Duration	N/A sec
Report Version	1.0
Classification	Internal Use Only

Executive Summary

CyberGuard completed an endpoint security assessment covering operating system security, running processes, startup programs, file integrity monitoring and risk analysis.

Risk Assessment

Risk Score	30 / 100
Raw Score	30
Overall Risk	MEDIUM
Highest Severity	HIGH
Total Findings	1

Risk Interpretation

CyberGuard identified **1** security finding(s) during this endpoint assessment. The endpoint achieved a security score of **30/100**, resulting in an **MEDIUM** overall security posture. The highest severity observed during the assessment was **HIGH**. The identified findings may increase the endpoint's attack surface if left unresolved. It is recommended that HIGH and CRITICAL findings be remediated and the system be reassessed before deployment into a production environment.

Endpoint Information

Hostname	Smriti
Operating System	Windows
OS Version	10.0.26200
Architecture	AMD64
CPU Usage	11.1 %
RAM Usage	72.8 %
Disk Usage	17.6 %

Security Findings

ID	Severity	Module	Title
CG-0001	HIGH	Process Analyzer	Unknown Process

Detailed Findings

CG-0001 - Unknown Process

Severity: HIGH

Category: Process Analysis

Module: Process Analyzer

Description: Unknown process detected (PID 236).

Recommendation: Investigate the process.

Security Recommendations

Recommendation	1
Finding	Unknown Process
Priority	HIGH
Module	Process Analyzer
Action	Investigate the process.

Assessment Summary

Assessment Tool	CyberGuard
Assessment Type	Endpoint Security Assessment

Generated	18 July 2026 17:40:21
Hostname	Smriti
Operating System	Windows
Risk Level	MEDIUM
Risk Score	30 / 100
Findings	1

Disclaimer

This report was generated automatically by CyberGuard. The findings are based on the system state at the time of assessment and should be validated by a security analyst before making operational or compliance decisions.
